

Graduate Student Colloquium – Judges

Thank you for participating in the 58th Annual Geosciences Graduate Student Colloquium. Judge participation is crucial to student development through the success of the symposium. This document details the general responsibilities and rubric for judging.

Scoring

All students will be judged alongside their peers. **Early-stage graduate students, who may be developing their research and communication abilities, are not expected to receive scores equal to the scores of senior students.** Our goal is to see students' scores improve as they advance in their graduate careers. In judging, please provide an integer score commensurate with the student's level as outlined in the scoring key with evaluative definitions below.

1-4 = Limited Attempt – student showed limited knowledge, attempt, communication, or quality of work.

5-8 = Developing – student's work came across correctly, but lacked clarity or quality in some aspects.

9-12 = Intermediate – student accurately and efficiently delivered all necessary information.

13-16 = Advanced – student displayed depth and breadth of ability.

17-20 = Mastering – student showed a practiced and perfected performance.

Judging Categories

The above 1-20 scoring system will be applied to the following three categories for each student in an assigned session and totaled for a final score out of 60:

1. Statement of Research Problem and Motivation
2. Analysis, Results, Conclusions
3. Communication Skill and Quality

All judges are asked to please provide comments below guiding students on areas for improvement, this is the primary way students can interpret and learn from their scores. Your feedback is greatly appreciated!

Graduate Colloquium – Rubric

*Scoring key: 1-4 = Limited attempt, 5-9 = Developing, 10-14 = Intermediate, 15-18 = Advanced, 19-20 = Mastering

	Score Scale 1-20 No half points.	Comments
Research Problem and Motivation • Clear, thoughtful questions/hypotheses • Significance explained to general geoscience audience • Motivations/broader impacts stated • Relevant previous work succinctly reviewed and gap in knowledge for study identified		
Analysis, Results, Conclusions • Clear, concise description of methods and analysis • Results are presented clearly and accurately • Results connected back to the significance • Study questions/hypotheses clearly addressed • Interpretations/conclusions supported by results		
Communication Skill and Quality • Audience engagement: body language, speaking pace, appropriate responses to questions • Suitable length of presentation • General appearance: colors, spacing, layout • Text: font, size, concise, grammar, spelling • Figures: relevant, informative, appealing • Flow: logical, facilitates understanding
